Dashboard Creation (External Platform)

Operational Checklist

AnalytiX configuration is typically performed by a **Client Admin**.

Configuration involves two steps:

1. **Dashboard Creation** — Design dashboards in the external analytics platform (SAYA Dashboard Designer / Apache Superset)
2. **Insight Configuration** — Map published dashboards to SAYA organisations and roles so that the correct users can view them

Configuration Entities

Configuration Entity	Icon	Purpose	Navigation Path
AnalytiX Insights		Maps external dashboards to organisations and roles, controlling which users can access which insights	Admin > AnalytiX > Insights

AnalytiX Insights

Overview

AnalytiX Insights controls which users can see which dashboards inside SAYA. Each insight links a published dashboard from the external analytics platform to a specific organisation and one or more roles.

When a user opens AnalytiX, they see only the insights mapped to their organisation where at least one of their roles matches the configured roles.

Navigation: Admin > AnalytiX > Insights

Prerequisites

Before creating an insight, ensure:

- The dashboard is created and published in the external analytics platform (SAYA Dashboard Designer)
- The target organisation exists in PlatformX
- The target roles exist in PlatformX for the organisation

Configuration Fields — Create

The **Create Insight** form contains the following fields:

Field Name	Type	Description	Required	Validation
Organisation	Dropdown	The organisation (tenant) for which this insight will be available. Populated from PlatformX organisations.	Required	Please select organisation
Roles	Multi-select dropdown	The roles that can access this insight. Users with any of the selected roles can view the insight. Populated from PlatformX roles.	Required	Please select role
Dashboard	Dropdown	The dashboard to embed as an insight. Lists available (unmapped) dashboards from the external analytics platform.	Required	Please select dashboard

Configuration Fields — Edit

The **Edit Insight** form contains the following fields:

Field Name	Type	Description	Required	Validation
Insight Name	Text (Read-only)	The name of the dashboard, automatically populated from the analytics platform. Cannot be modified.	Auto-populated	—
Organisation	Dropdown	The organisation this insight belongs to. Can be changed to a different organisation.	Required	Please select organisation
Roles	Multi-select dropdown	The roles that can access this insight. Can be updated to add or remove roles.	Required	Please select role

NOTE

The **Dashboard** cannot be changed after creation. The **Insight Name** is displayed for reference only and is derived from the dashboard name in the external analytics platform. To map a different dashboard, delete the existing insight and create a new one.

Creating an Insight

1. Navigate to: Admin > AnalytiX > Insights
2. Click **Create Insight**
3. Select the **Organisation** from the dropdown
4. Select one or more **Roles** that should have access to this insight
5. Select the **Dashboard** from the dropdown of available dashboards
6. Click **Save** to create the insight

 Create insight configuration form

Figure 1. Create Insight Form

TIP

You can also use the **Import From** dropdown to pre-populate the form with values from an existing insight, then modify as needed.

Editing an Insight

1. Navigate to: Admin > AnalytiX > Insights
2. Locate the insight in the list (card or table view)
3. Click the **Edit** action (pencil icon or row menu)
4. The **Insight Name** is displayed as read-only for reference
5. Modify the **Organisation** or **Roles** as needed
6. Click **Save** to apply changes

Cloning an Insight

To create a new insight based on an existing one:

1. Navigate to: Admin > AnalytiX > Insights
2. Locate the insight in the list
3. Click the **Clone** action from the row menu
4. The create form opens pre-populated with values from the selected insight
5. Modify the fields as needed (a new **Dashboard** must be selected)
6. Click **Save** to create the cloned insight

Deleting an Insight

1. Navigate to: Admin > AnalytiX > Insights
2. Locate the insight in the list
3. Click the **Delete** action (trash icon or row menu)
4. Confirm deletion in the dialog

WARNING

Deleting an insight immediately removes access for all users in the mapped organisation and roles. The dashboard remains in the external analytics platform but will no longer be visible in SAYA.

Form Actions

- **Save** — Saves the insight and returns to the insights list
- **Cancel** — Discards changes and returns to the insights list
- **Delete** — Removes the insight (available on edit form)
- **Import From** — Pre-populates the form from an existing insight (available on create form)

Dashboard Creation (External Platform)

Dashboards are created in the **SAYA Dashboard Designer** (or other configured external analytics platform such as Apache Superset).

Once a dashboard is created and published, it becomes available for selection in the **Dashboard** dropdown when creating a new insight.

Dashboard Creation Steps (External Platform):

1. Log in to SAYA Dashboard Designer
2. Create a new dashboard with desired charts, filters, and data sources
3. Publish the dashboard
4. The dashboard will appear in the **Dashboard** dropdown on the Create Insight form

NOTE

Dashboard design, data sources, and visual configuration are managed in the external analytics platform. AnalytiX only controls access and embedding within SAYA.

Operational Checklist

If users cannot see any insights:

- Confirm the user has the correct organisation assigned in PlatformX
- Confirm the user has at least one role that matches an insight configuration
- Verify at least one insight exists for the user's organisation and role(s)
- Confirm the external analytics platform (SAYA Dashboard Designer) is reachable
- Check that the dashboard still exists and is published in the external platform
