Product Overview

AnalytiX is the SAYA Platform's analytics module that delivers **operational insights** through embedded dashboards.

It integrates with external analytics platforms (such as SAYA Dashboard Designer or Apache Superset) and makes dashboards available inside SAYA as **Insights** with role-based access control.

AnalytiX enables operations teams and managers to view curated KPI dashboards without leaving the SAYA Platform, eliminating the need to manage separate analytics logins or navigate multiple systems.

Business Value

Reason	Business Impact	ROI Indicator
Unified Analytics Access	Users access all analytics from a single platform without switching systems or managing multiple credentials	↓ Login overhead, ↑ Dashboard adoption
Role-Based Visibility 	Dashboards are automatically filtered by organisation and role, ensuring users see only relevant insights	↓ Information overload, ↑ Data governance
Embedded Experience 	Dashboards render directly in SAYA with secure token-based embedding	↑ User experience, ↓ Context switching

Reason	Business Impact	ROI Indicator
Centralised Administration	Admins manage insight access from PlatformX alongside other user permissions	↓ Admin overhead, ↑ Access control consistency

Key Capabilities

Capability	Description	Business Value
Insight Catalog	Curated list of dashboards available to each user based on their organisation and role	Users see only relevant analytics without manual filtering
Embedded Dashboards	Dashboards render directly inside SAYA using secure embedding (guest tokens)	Seamless analytics experience without switching platforms
Role-Based Access Control 	Insights are mapped to organisations and roles, with users automatically granted access based on their profile	Simplified access management aligned with existing SAYA permissions
Organisation Scoping	Each insight is scoped to a specific organisation (tenant), ensuring data isolation	Multi-tenant analytics with automatic data separation
Dashboard Switching	Users can quickly switch between multiple insights using a dropdown selector	Efficient navigation for users monitoring multiple KPIs
Metrics Summary	Dashboard homepage shows the number of available insights for quick reference	Visibility into analytics coverage and adoption

Prerequisites

Before using AnalytiX, ensure:

- An external analytics platform is configured (SAYA Dashboard Designer or Apache Superset)
- At least one dashboard is published in the external platform
- User accounts have appropriate organisation and role assignments in PlatformX
- At least one insight mapping exists for your organisation and role

Getting Started

For Operations Users

1. Log in to SAYA Platform
2. Navigate to **AnalytiX** from the left menu

3. View available insights (dashboards assigned to your role)
4. Click an insight to open the embedded dashboard

See [Workspace Quick Start](#) for a 15-minute guided flow.

For Administrators

1. Ensure dashboards are created in the external analytics platform
2. Navigate to **Admin** > **AnalytiX** in PlatformX
3. Create insight mappings (link dashboards to organisations and roles)
4. Verify users can see the mapped insights

See [Configurations](#) for detailed setup instructions.

Typical Scenario

Scenario: A bank's Reconciliation Operations team needs daily KPI visibility.

Setup:

1. Admin creates dashboards in SAYA Dashboard Designer:
 - "Daily Recon Status"
 - "Exception Trends"
 - "SLA Performance"
2. Admin maps these dashboards to organisation "ABC Bank" and role "Recon Ops"

Daily Workflow:

1. Recon Ops user logs in to SAYA Platform
2. Opens **AnalytiX** from the menu
3. Sees 3 available insights (the mapped dashboards)
4. Clicks "Daily Recon Status" to view today's reconciliation metrics
5. Uses dashboard dropdown to switch to "Exception Trends"
6. Reviews data without leaving SAYA

Result: Team monitors KPIs in real-time without managing separate analytics system credentials.

Target Audience

Role	Focus Sections	Quick Start
Operations User	Workspace (viewing and navigating insights)	Workspace
Administrator	Configurations (how insights become visible)	Configurations
Support / Ops	Troubleshooting (access issues, loading issues)	Troubleshooting
