Product Overview

What is Exception Management?

Exception management is the process of handling records that don't match during reconciliation or require manual investigation. These are called **exceptions** or **breaks**.

Exception Management Scenario

Let us assume the following mismatch is found during reconciliation:

- **Source A (Bank):** Transaction ID TXN_99 | Amount: ₹5,000
- **Source B (ERP):** Transaction ID TXN_99 | Amount: ₹4,800

Result: **Discrepancy** of ₹200 → needs investigation.

Bank Statement	ERP / Ledger
₹5,000	₹4,800
↓	↓

↓
⚠ DISCREPANCY ₹200
(Exception / Break)

Most exceptions cannot be fully resolved by matching rules alone. They require humans to:

1. Investigate why the data differs
2. Decide what action to take
3. Document the decision
4. Route the item to the correct person/team if needed

Why is Exception Management Important?

Reason	Business Impact	ROI Indicator
Accuracy	Ensures all discrepancies are investigated and resolved	↓ Errors and write-offs
Accountability	Creates clear ownership via queue assignment and audit trail	↑ Traceability
Compliance	Preserves evidence for audits and regulatory checks	↓ Compliance risk
Efficiency	Prevents items from being lost in email/spreadsheets	↓ TAT (Turnaround Time)
Collaboration	Enables teams to coordinate with consistent workflow actions	↑ Team throughput

What is ResolveX?

ResolveX is 3Cortex's exception management module. It provides workflow-based handling of reconciliation breaks and other items requiring manual processing.

Prerequisites

Before using ResolveX, ensure:

- An **Ops Process** is configured and linked to a workflow
- Your user has appropriate **role mappings** for workflows, queues, and actions
- For automated exception routing: **ReconX integration** is configured to send unmatched items to ResolveX

Optional for advanced workflows:

- **Rules** - Created for condition-based automatic routing (see [Rules Configuration](#))
- **Events** - Configured for time or schedule-based automation (see [Events Configuration](#))

Getting Started

See the [15-Minute Quick Start](#) in the Workspace guide for your first end-to-end workflow operation.

For administrative setup, refer to [Configurations](#).

Typical Scenario

See the example scenario at the top of this page (Exception Management Scenario) showing how a ₹200 discrepancy moves through investigation, decision-making, and resolution.

For complete real-world examples, see [Use Cases](#).

The ResolveX Advantage

NOTE

Industry Benchmark: Manual exception handling often relies on spreadsheets and email threads. ResolveX centralizes exceptions into **queues with structured actions**, improving visibility and reducing resolution time.

Key Capabilities

Capability	Icon	Business Value
Workflow Engine		Define multi-stage processes with queues and actions so exceptions follow a consistent path
Visual Flow Designer		Build workflows visually, see entire workflow structure at a glance with color-coded edges
Rule-Based Routing		Automate item routing based on conditions using FEEL expressions - no manual triage needed
Event-Driven Actions		Trigger automatic actions based on time (SLA escalation) or schedules (daily reminders)
Role-Based Access		Route items to the right teams based on roles (maker/checker, escalation, approvals)
Queue Management		Organize work into clear stages, track counts, prevent backlog from being hidden

Capability	Icon	Business Value
Action Framework		Standardize decisions (Approve/Reject/Escalate/Request Info) with mandatory notes
Notes & Attachments		Capture context and evidence directly on the item (audit-friendly)
Followup Communication		Send emails directly from the platform to request information or confirm resolution
Audit Trail		Immutable history of actions, queue moves, notes, and assignments
Integration with ReconX		Seamless handoff of unmatched items from ReconX into ResolveX workflows

Data Flow: Without vs With ResolveX

Who Should Use This Manual

Role	Focus Sections	Quick Start
Operations User	Workspace, Performing Actions, Notes/Attachments	15-Minute Quick Start
Operations Manager	Queue Monitoring, Escalations, Best Practices	Workflow Design Best Practices
Workflow Designer	Flow Designer, Rules, Events, Controls	Flow Designer
Client Admin	Workflow Configuration, Queues, Actions, Rules, Events	Configurations

Role	Focus Sections	Quick Start
Fresher/New Joiner	Introduction, Terminology, Getting Started	Read sequentially from here
