Product Overview

PlatformX is the core administration module of the SAYA Platform. It provides the foundation for managing organisations, users, roles, and platform settings.

Without PlatformX, the platform cannot function: it controls authentication, authorisation, organisational structure, and the foundation for operations across the SAYA Platform.

Business Value

Reason	Business Impact	ROI Indicator
Security 🛡️	Ensures least-privilege access and segregation of duties	↓ Risk exposure
Governance 🔄	Role assignments and changes are traceable for audits	↑ Audit readiness
Speed of Onboarding 📅	Standard onboarding flow reduces time to go-live	↓ Setup time
Operational Control 🔑	Consistent permission model prevents ad-hoc access exceptions	↓ Support tickets
Scalability	Multi-tenant model supports many organisations under one platform	↑ Client capacity

Key Capabilities

PlatformX enables:

- **Multi-tenant Organisation Management** 🏢 - Keep each client's data and configurations separate with complete data isolation
- **User Access Control** 👤 - Manage who can access which features and modules with granular precision
- **Role-based Permissions** 🛡️ - Assign granular access rights with hierarchical inheritance for simplified administration
- **Team Organisation** 👥 - Group users into departments for routing, approvals, and notifications
- **White-label Branding** 🖌️ - Customise logos, colours, and appearance per service provider for client-facing deployments
- **Internationalisation** 🌐 - Support multiple languages, locales, and regional settings

Prerequisites

Before working with PlatformX, ensure you have:

- **Cloud Admin access** (for SAYA Operations) OR **Client Admin access** (for organisation-level administration)
- **Organisation created** by SAYA Operations during initial deployment
- **Modern web browser** (Chrome, Firefox, Edge, or Safari)

For new client onboarding, SAYA Operations must complete initial setup before Client Admin access is granted.

Getting Started

New to SAYA? Follow these steps to get oriented:

1. **Learn the basics:** Read [Getting Started](#) to understand login, dashboard navigation, and common UI features
2. **Understand onboarding:** Review [Onboarding Process](#) for the complete workflow and responsibility matrix
3. **Configure your organisation:** Use [Configurations](#) to set up departments, roles, and users
4. **Review use cases:** See [Use Cases](#) for practical scenarios

Typical Scenario

A new client is onboarded to SAYA. Before they can start using ReconX/ResolveX, an admin must:

1. Create the **Organisation**

2. Enable required **Products**
3. Create **Departments**
4. Create **Roles**
5. Create **Users**

SAYA Platform Setup (High Level)

TEXT

Result: Users can access enabled modules based on their role.

Target Audience

Role	PlatformX Tasks	Access Level
Cloud Admin (SAYA Ops)	Full platform administration: create organisations, manage service provider settings, configure locales	Full access (PlatformX Manage++)
Client Admin	Org-level administration: create users, assign roles, manage departments within their organisation	Organisation-scoped admin (PlatformX Manage)
Operations Head	Operational oversight: manage across departments, configure processes	High-level admin (PlatformX Manage)
Department Head	Department management: configure within department scope	Config access (PlatformX Modify)
Operations User	Day-to-day usage: view configurations, limited actions	Read-only / limited (PlatformX View)
