TIP

This page defines the most common AnalytiX terms used in the UI and APIs. Keep it bookmarked for quick reference.

Core Concepts

Term	Definition	Example
Insight	A dashboard that is made available to users inside the SAYA Platform based on organisation and role mapping	"Daily Recon Status" insight shows reconciliation KPIs to Recon Ops users
Dashboard	A visual analytics page composed of charts, tables, and filters created in the external analytics platform	A dashboard showing transaction volumes, trends, and exception counts created in SAYA Dashboard Designer
Embedded Dashboard	A dashboard rendered directly inside SAYA rather than opened in a separate analytics system window	When you click an insight, the dashboard loads within the SAYA UI using a secure guest token
Organisation	A tenant boundary used to scope access to insights. Each insight mapping is specific to one organisation.	"ABC Bank" organisation has insights mapped separately from "XYZ Corp"
Role	A permission group used to control which insights a user can see. Users with matching roles can access the insight.	Users with "Payments Ops" role see payment-related insights; "Management" role sees executive dashboards
Guest Token	A short-lived security token generated on demand to securely embed dashboards inside SAYA	Token expires after 10 minutes (typical); user must reload dashboard to generate new token

Configuration Entities

Entity	Definition	Example
Insight Mapping 	A configuration record that links an external dashboard to a SAYA organisation and one or more roles, controlling who can access the insight	Mapping "Exception Trends" dashboard (UUID: abc-123) to organisation "ABC Bank" and roles ["Recon Ops", "Management"]
Dashboard UUID	Unique identifier for a dashboard in the external analytics platform, used to reference the dashboard when creating insight mappings	3f4a5b6c-7d8e-9f0a-1b2c-3d4e5f6a7b8c (from SAYA Dashboard Designer or Apache Superset)
Organisation ID	Numeric identifier for an organisation (tenant) in PlatformX, used when configuring insight mappings	Organisation ID: 1001 for "ABC Bank"
Role ID	Numeric identifier for a role within an organisation, used when configuring which roles can access an insight	Role ID: 2005 for "Payments Operations" role

Common UI Labels

Label	Meaning
Configured AnalytiX	The list of insights available to the current user based on their organisation and role assignments
View Dashboard	Action to open the selected insight and render the embedded dashboard
Insight Dropdown	Selector that allows switching between multiple insights without returning to the main list
