Ingestion Status

TIP

Keep this page bookmarked. DataX uses a few key configuration terms that repeat across screens.

Core Concepts

Term	Definition	Example
Ingestion	Process of bringing data into the platform and persisting it into a Data Set.	Uploading a CSV and processing it into a transaction Data Set.
Execution	A single run of an ingestion job, recorded with status, timing, and metrics.	Execution ID 12345 for today's upload.
Source Identifier	A label used to identify an incoming file/source instance for processing.	BANK_STATEMENT_2026-01-05.csv
Schema/Format Validation	Checks that the incoming data matches the expected format.	Mandatory columns present; dates parseable.

Ingestion Status

Execution statuses indicate the outcome of a data ingestion run.

Status Code	Description	Visual Indicator
In Progress (IN_PROGRESS)	Execution is currently processing data.	

Status Code	Description	Visual Indicator
Successful (SUCCESS)	Execution completed successfully and data was fully ingested.	✓
Failed (FAILURE)	Execution failed due to errors; review problems/errors for details.	✗
Partially Successful (PARTIAL)	Execution completed with some issues (e.g., rejected rows or validation warnings).	⚠
Duplicated (DUPLICATE)	Execution was identified as a duplicate ingestion and was not reprocessed.	📄
