Troubleshooting

Troubleshooting

Common Issues

Workspace Troubleshooting (What to do when...)

- You uploaded files, but you do not see new records
- Reconcile ran, but there are no suggested matches
- You are getting too many suggested matches
- The system suggested a match, but you are not sure why
- You cannot link records
- You linked the wrong records
- When should you use ATC?

Error Messages Reference

- Configuration Errors
- Upload & Ingestion Errors
- Reconciliation Errors
- Workspace Operation Errors
- Rule Configuration Errors
- Permission Errors

Performance Tips

Common Issues

Issue	Likely Cause	Solution
No records found	Wrong Ops Process or date range	Check dropdown selections; verify data ingestion completed
Low auto-match rate	Rules too strict	Run Recon Optimizer; consider adding tolerances
Too many false matches	Rules too lenient	Tighten tolerances; add more matching fields
Cannot link records	Already linked or status changed	Check current status; delink first if needed
Send to ResolveX fails	No workflow configured	Admin must add workflow to Ops Process
Reconcile button disabled	Insufficient permissions	Contact admin for "reconciliation process" permission

Workspace Troubleshooting (What to do when...)

You uploaded files, but you do not see new records

- Confirm you uploaded `.csv` files.
- Confirm you selected the correct **Ops Process** and **Period**.
- Switch between **Data Source 1** and **Data Source 2** tabs.
- If a dataset is empty, verify the CSV headers and formatting.

Reconcile ran, but there are no suggested matches

- Ensure recon rules exist (open **View & Edit Recon Rule** and confirm at least one rule is present).
- Add a stronger identifier rule (e.g., reference/transaction id) before using tolerance-heavy rules.
- Check if your selected record has expected key values populated.
- Run **Recon Optimizer** to generate a baseline rule set if you do not know where to start.

You are getting too many suggested matches

- Add a stronger identifier rule to reduce ambiguity.
- Reduce tolerance values.
- Avoid using only broad columns (e.g., `Amount` alone) as a primary rule.

The system suggested a match, but you are not sure why

- Use **SAYA AI Ethics** to view which rules contributed to the suggestion.
- Use the detail view and compare key fields side-by-side.

You cannot link records

- Ensure you selected at least one suggested match.
- Enter **User Notes**.
- Check that the record is **Open**.

You linked the wrong records

- Use **Delink Records** (for reconciled items) and add corrective notes.
- Update the rules to prevent the same incorrect match pattern.

When should you use ATC?

- Use ATC only after you have enough manual links to represent normal matching variation.
- If your data has outliers, calibrate after the process stabilizes.

Error Messages Reference

This section lists system error messages with explanations and resolutions.

Configuration Errors

Error Message	Cause	Solution
"Ops Process name already exists"	Duplicate name in system	Choose a unique name for your Ops Process
"Data Set 1 and Data Set 2 cannot be the same"	Same Data Set selected for both sources	Select different Data Sets for 2-way reconciliation
"No workflows available for selected departments"	Workflows don't overlap with departments	Create workflows for selected departments first, or adjust department selection
"Multi-match requires at least one numeric field"	Multi-match enabled but no amount/numeric field in rules	Add a numeric field (Amount, Quantity) to Recon Rules with multi-match enabled
"Invalid multi-match buffer value"	Buffer percentage outside valid range	Enter value between 0-100 (e.g., 2 for 2% buffer)
"Cannot delete Ops Process: N-Way dependencies exist"	Ops Process is used in N-Way Recon Process	Remove from N-Way processes first, then delete

Upload & Ingestion Errors

Error Message	Cause	Solution
"CSV headers don't match Data Set configuration"	Column names in uploaded file don't match expected schema	Check Data Set configuration in DataX; ensure CSV headers match exactly (case-sensitive)
"File format not supported"	Non-CSV file uploaded via UI	Only .csv format supported. Convert Excel/other formats to CSV first
"File exceeds maximum size"	Upload file larger than configured limit (typically 50MB)	Split large files or use DataX batch ingestion for files > 50MB

Error Message	Cause	Solution
"No records found in uploaded file"	CSV has headers only, no data rows	Ensure file contains data rows below header row
"Duplicate column names detected"	CSV has multiple columns with same name	Rename duplicate columns to unique names (e.g., Amount1, Amount2)
"Invalid date format in row X"	Date values don't match expected format	Use consistent date format (YYYY-MM-DD or configured format in Data Set)

Reconciliation Errors

Error Message	Cause	Solution
"Cannot reconcile: No recon rules defined"	Recon rules don't exist for this Ops Process	Run Recon Optimizer first, or create manual rules in View & Edit Recon Rule
"Reconciliation timed out"	Dataset too large or rules too complex	Reduce date range, add more specific rules, or contact support for performance tuning
"No records available for reconciliation"	Selected period has no data, or wrong Ops Process selected	Verify correct Ops Process and Period; upload data if needed
"Multi-match aggregation failed"	Too many candidates in multi-match group (> 10,000)	Add stronger identifier rules to reduce candidate pool; increase system resources
"N-Way reconciliation incomplete"	One or more pairwise Recon Units failed	Check status of individual Recon Units; fix failing pairs before re-running N-Way

Workspace Operation Errors

Error Message	Cause	Solution
"Cannot link: Record already linked"	Attempting to link an already-reconciled record	Delink first if you need to change the match, or select a different Open record
"Cannot link: No match selected"	Link button clicked without selecting a suggested match	Select at least one record from Suggested Matches panel before clicking Link
"User notes required for manual link"	Attempting to link without providing explanation	Enter justification in User Notes field explaining why these records match

Error Message	Cause	Solution
"Cannot delink: Record not reconciled"	Attempting to delink an Open (un-matched) record	Only Reconciled records can be delinked; check record status filter
"Send to ResolveX failed: No workflow configured"	Ops Process doesn't have workflows assigned	Admin must add workflows to Ops Process configuration
"Send to ResolveX failed: Insufficient permissions"	User doesn't have permission to escalate to ResolveX	Contact admin for "send to workflow" permission
"Cannot access record: Assigned to another user"	Record locked by another user during investigation	Wait for other user to finish, or admin can unlock the record

Rule Configuration Errors

Error Message	Cause	Solution
"Invalid tolerance value for date field"	Non-numeric tolerance on date field	Enter numeric days (e.g., 2 for 2-day tolerance)
"Tolerance not applicable for string fields"	Attempting to set tolerance on text field	Remove tolerance from STRING fields; use exact match or fuzzy match instead
"Cannot delete last rule"	Attempting to delete the only rule	At least one rule required; add a new rule before deleting this one
"Circular reference detected in rules"	Rule dependencies create infinite loop (rare)	Simplify rule structure; contact support if issue persists
"ATC enabled but tolerance field not empty"	Autonomous Tolerance Calibrator conflicts with manual tolerance	Clear tolerance value when using ATC (system will compute it)

Permission Errors

Error Message	Cause	Solution
"Reconcile button disabled"	User lacks "run reconciliation" permission	Contact admin for "reconciliation process" permission
"Cannot create Ops Process"	User not an admin or lacks configuration permission	Admin rights required for configuration; request admin access
"Cannot edit recon rules"	User has view-only access	Request "edit recon rules" permission from admin
"Cannot access N-Way workspace"	User's department not assigned to N-Way process	Admin must add your department to N-Way Recon Process configuration

TIP

Still stuck?

1. Copy the exact error message
 2. Check this reference table
 3. If not listed, check [Terminology](#) for term definitions
 4. Contact support with: error message, Ops Process name, and steps to reproduce
-

Performance Tips

TIP

- Filter by date range to reduce data volume
 - Process in batches for very large datasets (50,000+ records)
 - Run Optimizer periodically as data patterns change
 - Download for complex offline analysis when needed
-
